ZODIAC MILPRO answers airport rescue requirements

The ICAO (International Civil Aviation Organization) requires that

“Search and rescue units shall be provided with equipment for locating promptly, and for providing adequate assistance at, the scene of an accident”, and

“To achieve and maintain maximum efficiency in search and rescue, contracting states shall provide for regular training of their search and rescue personnel and arrange appropriate search and rescue exercises”.

Zodiac Milpro offers a multi solution proposition for airport rescue combining “Turn Key” RIBs fitted with Inflatable Liferrafts, the training of Search and Rescue teams and a maintenance scheme to assure operational readiness and provide immediate safety in emergency situation.

✓ RIBs (Rigid Inflatable Boats), with out-board engines or diesel inboard jet propulsion offer the best stability and the safest way to efficiently rescue people from the water in all sea state conditions.

✓ Based on proven designs, already deployed in several locations around the world, Zodiac Milpro™ RIBs are immediately operational when minutes count.

Zodiac Milpro, a supplier to the most demanding SAR organizations around the world, has developed a specific expertise in this field and proposes shore based or ship base craft, fiberglass or aluminum hulls.
